SimpleHold

Rosco introduces the SimpleHold. An all in one metal pattern holder & standard pattern etched together on a single piece of metal, for easy use in Leko style lanterns such as Source 4s, SPX and Pacific's. Manufactured with your choice of Rosco's/DHA's standard metal catalogue patterns or a custom image and sized for the Iris slot position, the SimpleHold 'simplifies' the combination of gobo holder & pattern. Either A or B size images can be chosen. No longer will the need be to search for the right pattern holder to fit a standard metal pattern because of the all in one gobo and holder features. Easy to use instructions are etched on the holder itself, for care, use and removal in the lanterns. The SimpleHold provides an alternative new and simple solution for metal gobo projections.

The addition of the SimpleHold continues the process of development that makes Rosco the leading innovator in Gobo projection and gives more choice to the user.
